

Omar Emad Abdelrahman

Full Stack Developer | ERP, SaaS & Custom Business Systems

Cairo, Egypt | 01143811263 | oemad8637@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Full Stack Developer with two years of professional experience at Eclipse Agency plus extensive freelance project work. Specialized in building complete business systems tailored to how each company actually operates - including ERP and CRM platforms, SaaS products, booking and management systems, e-commerce workflows, dashboards, and internal business tools.

Experienced across frontend and backend development, databases, APIs, authentication, role-based permissions, payments, automation, reporting, deployment, and ongoing product improvement. Advanced user of Claude and OpenAI Codex for implementation, debugging, problem-solving, code review, and faster delivery.

Education

Bachelor of Commerce - Accounting

Cairo University | 2022-2026

Graduated in 2026.

Professional Experience

Full Stack Developer - Eclipse Agency | 2024-2026

- Built and maintained production websites, admin dashboards, and custom full-stack systems for businesses across different sectors.
- Designed systems around real operational workflows, including ERP/CRM, booking, e-commerce, customer management, finance, staff, reporting, and internal processes.
- Worked end-to-end across interfaces, backend logic, databases, APIs, authentication, permissions, integrations, deployment, maintenance, and troubleshooting.
- Used Claude and OpenAI Codex extensively throughout development to accelerate implementation, debugging, refactoring, and technical problem-solving.

Freelance Full Stack Developer | 2024-Present

- Delivered multiple freelance systems and digital products for clients across legal, healthcare, marine, automotive, furniture, spa, interior design, and service businesses.
- Built custom platforms based on each client's service model and operational needs rather than relying on one fixed type of website or system.
- Handled projects independently from requirements and system planning through development, integrations, deployment, revisions, and ongoing improvements.
